Who has the oldest?

This inquiry got us thinking about who might have the oldest Gallagher/PEC dispensers still in use. Please, contact us if you know of any older units, we would love to hear from you.

Built to Last

This long term strategy has provided consistent quality year on year, decade after decade. We regularly speak to people still using equipment we supplied well over 20 years ago.

Invest Long Term

It has always been the focus to deliver superior value that keeps going long after the initial investment.

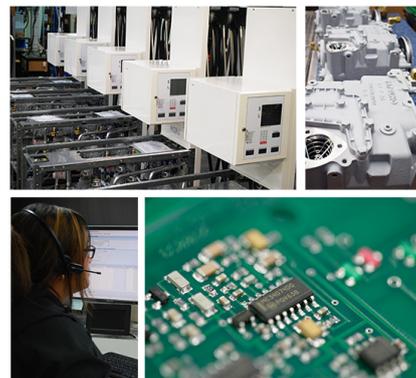

What did Technical Support have to Report?

Recently we received a request from a Site to replace their 20 year old Gallagher dispensers. Certainly, this is not uncommon for us, but in this instance it inspired us to further explain exactly why our dispensers last so long.

For the most simple explanation, "Gallagher use the best available component assemblies for each core element", and here's how it works.

We know that a fuel dispenser consists of 4 core elements; the hardware, metering, electronics, and support. Then let's learn what Gallagher do in the build of their dispensers that differ from everyone else.

The following table describes characteristics of our dispenser care and construction unique to the Gallagher range.

Core Element	Unique Construction Feature	Benefit
Hardware	Chassis/frame made from heavy gauged galvanised steel, powder coated aluminium panels	Robust, will last through the harsh weather extremes of our region with 5 year corrosion warranty on panels
Metering	Our partners Tatsuno provide arguably the most accurate metering used with Gallagher control software	Consistent, reliable, accurate dispensing, exceeds NMI, often no need to adjust. Low maintenance, 3yr accuracy warranty
Electronics	All electronics designed and manufactured in New Zealand with stringent quality processes	Robust, loaded with features, the electronic design allows for integration of future technologies. Parts available quickly and easily
Support	A depth of knowledge from Gallagher local based support technicians and Service Partners with decades of product/industry experience	Quick resolution times on Site, ability to monitor remotely and provide diagnostic data often resulting in no call-out required

Save the Date - Upcoming Shows and Events

Convenience & Impulse Expo 2019 - Australia | 14 August- 15 August
International Convention Centre, Sydney, Australia come see us at Stand 17/18

APFI (Asia Pacific Fuel Industry) Forum 2019 | 17 September- 18 September
Convention Centre, Melbourne, Australia come see us at Stand 22

Convenience & Impulse Expo 2019 - New Zealand | 18 September- 19 September
The Cloud, Auckland, New Zealand come see us at Stand 7
