

Gallagher Newsletter

Renewable hydrogen

The development of a low emissions future using renewable hydrogen continues in the Pacific region. Gallagher support this progress and are members of "Hydrogen" New Zealand, and "Hydrogen mobility Australia". For more information check out:

The awe(SOM) team!

The highly efficient and experienced SOM team pride themselves on product knowledge and timely responses.

Simultaneous delivery

The ability to deliver DEF and diesel at the same time is also a feature included in the Gallagher PULSE range.

Our Service Agent Network is Expanding

Our Authorised Service Provider network continues to grow as the demand for our product increases. This is positive for our customers. An expanding network means more trained feet on the ground and more people with access to spares.

Gallagher do provide comprehensive interactive training to all our service providers on a regular basis; or tailored training on request.

Our training covers all aspects of installation, servicing and commissioning of our dispensers, including vapour recovery. This year, we will also demonstrate the new features of software version 1.20. We believe even the most experienced service provider will learn valuable tricks and techniques from this training.

We encourage all that can, to attend. All you have to do is turn up, we will provide everything else. Even lunch is on us! We only ask that you pre-book for catering purposes.

Sydney at The Ryde-Eastwood Leagues Club | 9 September 2019

Brisbane at The Construction Training Centre | 10 September 2019

On line training videos, are also available to our support agents by logging into our support website. Also available here are technical bulletins, manuals, brochures and a product catalogue.

Changes to the Sales Order Management (SOM) Team

Jarrod McPhail (middle) surrounded by the SOM team

After 10 fun years in the SOM team, Tammi Weitenberg has resigned her position and been replaced by Jarrod McPhail.

Although we are sad to see her go, Jarrod brings experience and knowledge in logistics and dispenser manufacturing.

Being the only male in a team of 6, by default he has already been given credit for bravery.

The One Stop Shop

Out the door goes Gallagher's first 10 hose dispenser with LPG, the most versatile dispenser yet. The "LU" dispenser offers a huge range of products from a single fuelling point.

The ability to preset any product including LPG and DEF is another great feature available in the PULSE Range.

This new PULSE dispenser is yet another great example of Gallagher's ability to fully customise models.
